Providing support and services for marine biological research and innovation

About EMBRC

The European Marine Biological Resource Centre (EMBRC) is a provider of cultured and wild-type marine micro- and macro-organisms for biological and ecological R&D.

Our sites also offer robust, cost-effective, and customised services, facilities, and analytical platforms to support R&D.

We work with diverse stakeholders from academia and industry.

EMBRC services for the algae industry

- **Bioresources** – access to a large range of microbial strains and macroalgae species; expertise in culturing techniques and husbandry
- **Technology platforms** – biological analysis, imaging, molecular biology and omics, remote sensing and telemetry, structural and chemical analysis
- **Experimental facilities** – aquaria and mesocosms, wet and dry laboratories, climate rooms, aquaculture facilities, photobioreactors
